The Ribolla Veranda

Exceptional detached veranda

Presenting the Ribolla, an exceptional detached veranda designed for ultimate versatility and aesthetic appeal. With various colour and customisation choices, the Ribolla offers a unique outdoor experience tailored to your preferences.

Why choose the Ribolla for your home?

Can be placed anywhere in your backyard for ultimate flexibility.
Offers a customisable configuration to match your preferences.
Abundance of optional accessories to enhance your outdoor experience.

Experience the freedom to create a covered terrace anywhere in your backyard

Choose between round or Victorian gutters, square posts, and a polycarbonate roof available in Opaque, Clear, Ultra Clear, or Solar Control options. The Ribolla comes in widths of 4060, 5060, and 6060 mm, with depths ranging from 2500 to 6000 mm.

Experience the freedom to create a covered terrace anywhere in your backyard with the Ribolla. Unlike traditional verandas, the Ribolla is entirely independent, allowing you to position it at the end of your garden, by the pond, or next to the pool for optimal enjoyment. Its flexible configuration includes a closed rear wall, one closed side wall, or a side wall with an ultra-clear polycarbonate window and a railing on one side.

RIBOLLA

Verdeca / Folding roof

Ultimate flexibility with a sleek design

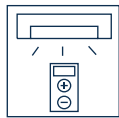

Enjoy extra living pleasure in the garden through ultimate flexibility. Who would not want that? The Verdeca roof canvas is made of a sun-resistant and water-resistant fabric. Are you sitting under this veranda and want to enjoy the sun? Then, with one push on the button, raise the canvas (partially) so you can immediately enjoy maximum light and the beautiful weather. If you prefer to sit in the shade or seek protection against wind, rain or UV radiation, you can close the screen with the same ease.

By adding glass sliding walls you can choose to extend your Verdeca veranda to a complete garden room. With the flexible Verdeca veranda, you can therefore enjoy optimum comfort at your terrace.

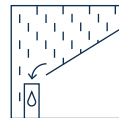

The Verdeca veranda has a white water-repellent canvas and a grey coloured frame from aluminium. In addition, the special geometric design ensures that the interior construction offers maximum strength and wind resistance to the aluminium profile.

The veranda looks sleek and offers perfect visibility because the stainless steel connection elements and screws are concealed invisibly. In addition, the rain gutter is equipped with an anti-draft system, which prevents the wind from entering between the canvas, the rails and the rain gutter.

Integrated LED lighting in the beams

Optionally, we have integrated dimmable LED light lines in the canvas. This way you can easily switch between practical, bright and atmospheric low beam lighting.

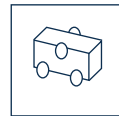

Effortless drainage of water

Rain water dripping down from the front? Not with the Verdeca veranda! The smart IDS (Integrated Drainage System) ensures invisible drainage of rainwater through the uprights at the front.

100% water-repellent

The foldable canvas is 100% waterproof.

6-wheel system

The innovative 6-wheel system carries the fabric up and down over the rail, silently, quickly and in a well-balanced way.

DETAILS

Aluminium colour	RAL7024
Canvas colour	White
Control	The Verdeca canvas and optional LED lighting can be controlled with the supplied SOMFY remote control.
Width (mm)	4000 / 5000 / 6000
Projection (mm)	3000 / 3500 / 4000

ADDITIONAL OPTIONS

Optional	Glass sliding walls

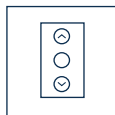

Pinela Deluxe / Aluminium Louvered Roof

The convertible effect in your garden

With the push of a button you can open the roof panels of the Pinela Deluxe. This versatile, automatic roof design provides protection from the rain, shade from the sun or can be fully open to allow for optimal light. Rain or shine, you will experience the ultimate outdoor living feeling.

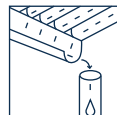

With the Pinela Deluxe you can create an outdoor space that offers protection against all types of weather. When you open the synchronously moving panels, a large space is created above your terrace. When closing, the panels simultaneously press on the gaskets of the side profiles providing optimal protection.

Automatic operation

You can control the roof of the pergola with one push on the remote control of the Somfy system.

Effortless drainage

The water on the panels is led to the gutter and then drained effortlessly.

Optimal light

When the panels are fully opened, you will experience optimal light.

Protection

The panels close with a synchronous movement on the side profiles, which guarantees optimum protection.

DETAILS

Colours	RAL7024

Glass Sliding Doors

Enjoy your garden all year round

The glass sliding door system seamlessly adapts to the current weather conditions, effortlessly transforming from an open-air canopy to a fully enclosed area when faced with wet and windy weather. This versatile design ensures complete protection and comfort, allowing you to enjoy your outdoor space regardless of the elements.

The sliding door system can be added to any outdoor space to fully embrace all the seasons and the weather they bring.

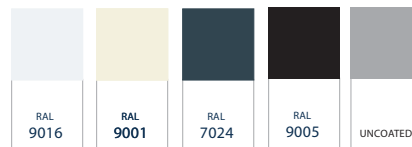

The glass panels are available in various height and width dimensions running 2-6 rail tracks with no additional frame giving a permanent unrestricted view you can enjoy all year round.

Sliding glass doors provide you with shelter and space.

If you want to enjoy the outdoors longer, glass doors provide extra shelter against wind and rain. As a result, you'll always have enough light and a great view of your back garden. Moreover, our glass doors are not only a suitable addition to your veranda but also to shield your porch, garden house, cabin or balcony.

The glass panels are available in various height and width dimensions, they can run on 2 to 6 rail tracks with no additional frame. This gives you a permanent, unrestricted view you can enjoy all year round.

The glass sliding walls can be expanded with various glass wall accessories, such as handles and carriers.

Aluminium Panels

The perfect basis for your creativity

Aluminium panels are unique in our product range as they can be used to customise the style of your veranda to meet your specific requirements. Crafted from lightweight aluminium, their stackable design ensures effortless assembly, complemented by easy-to-use click profiles.

These panels afford you the freedom to create a solid aluminium wall for total privacy, shielding you from prying eyes and creating a sanctuary of seclusion. Alternatively, embrace a half aluminium wall, striking a perfect balance between privacy and natural light, inviting the outdoors in while maintaining a sense of privacy and tranquillity.

With this versatile solution, your veranda becomes a personalized haven where you can enjoy the best of both worlds.

The durable and flexible character of the panels offers endless possibilities

The aluminium panels are available in four different RAL colours to perfectly complement your veranda's aesthetic.

Whether closing off the side or back walls for a seamless integration with your space or adding a stylish touch to the lower half of your veranda, these panels offer both shelter and sophistication against the wind and elements. The flexibility of the panels rivals that of traditional wood, allowing you to achieve the same stunning designs with enhanced durability and minimal maintenance. With endless possibilities at your fingertips, elevate your outdoor living experience with the enduring elegance and practicality of our aluminium panels.

WHAT A TRANSFORMATION

BEFORE

AFTER

VERSATILE MODULAR DESIGN

One of the key advantages of WeatherMaster Verandas lies in its modular design, offering flexibility and convenience to our customers.

You can **start with a canopy veranda**, enjoying the open-air experience and shelter from the elements.

Then, as your needs or budget allow, you have the option to seamlessly add glass doors and panels to **transform it into a fully enclosed glass room** at any later date.

This modular approach not only allows you to customise your outdoor space to fit your current lifestyle but also provides the flexibility to budget your investments over time, making it a practical and versatile choice for any homeowner

WHAT TYPE OF VERANDA WILL SUIT YOU

We can offer a host of solutions to suit your particular site and preferences. Most of the verandas we fit have some degree of customisation to suit the particular site. We will look at some of the most common formats used.

OPEN SIDED

In their simplest form, our verandas are open sided (open on 3 sides), consisting of a roof abutted onto a house wall, and projecting up to 6m out from the building. A reinforced gutter at the lower veranda front is supported by a series of

posts attached to the ground. Rain water from the veranda roof is fed into a downpipe, concealed within one of the support posts.

VERANDA IN CORNER

Here is an example of a Veranda fitted in a corner, This could be left open sided or could be closed in at a later

date with a combination of Aluminum Wall and sliding glass panels.

FULL POLYCARBONATE WALL

This veranda is fitted in a corner and has one of its ends fitted with polycarbonate panels. In this case it is Opal (opaque) Polycarbonate, but could also be either clear

polycarbonate panel or Ultra - Clear panels for greatest transparency.

We can enclose a complete side of a veranda with a solid aluminum wall, colour matched to the veranda structure

colour. This created complete shelter and privacy.

HALF & HALF VERANDA FRONT

Here is an example of a 4m x 4m Bosco veranda installed in a corner with one side closed off to create additional shelter. This wall is aluminum panel on the bottom and

Ultra Clear polycarbonate sheeting on the top.

HALF & HALF VERANDA SIDEWALL

Here is an example of a veranda sidewall fitted with 1/2 and 1/2 Ultra Clear polycarbonate panel and Aluminum sidewall.

SIDEWALL partial sliding glass panels

Here the "walk-in" height at the gutter is 1.8m. This 3.7m wide sidewall consists of a 2.5m wide Sliding Glass Panel set (2m high) and a 1.2m wide Solid aluminum panel wall.

Note the gutter downpipe exits the corner support post at a height convenient for a water butt.

Here, a veranda open on all 3 sides serves as a carport. The veranda can project up to 6m out from a building. A carport can be a great addition to a house, particularly when positioned to shelter an entrance. It will really be

appreciated when you bring the weekly shopping home and when departing or arriving home when it's raining.

ALTERNATE ROOF SUPPORT

In most cases, our verandas are fitted onto your building, where the veranda backplate abutts onto your house wall and the lower front end of the veranda (where the veranda gutter is) is supported by vertical posts attached to the

ground. In some cases, where this is not possible, the veranda roof is instead supported by custom made suitable wall brackets.

PARTIALLY ENCLOSED VERANDA

We can create a "Glass Room" on all or part of your veranda. In this example, a portion of the veranda retains its open sides, while a section walled off with sliding glass panels creates a "Glass Room". Note that the "wedge" on top of the enclosed veranda sidewalls is solid aluminum panel (colour matched to the veranda structure colour).

Alternatively, this "wedge" positioned above the sliding glass panels on the veranda endwalls could be of polycarbonate panel (either opal or clear).

SUPPORT POST POSITIONING

In most cases, the veranda front roof support posts are positioned at both front corners. The total number of front support posts fitted will depend upon the length of the veranda. In this case, one of the front corner support posts is positioned 1m in from the end of the roof, allowing it to

be fitted on the raised platform area and the roof to extend unsupported for 1m. Also, the gutter downpipe can be seen exiting at the bottom of the corner support post.

RIBOLLA FREESTANDING UNIT incorporating existing walls

This 4m x 4m Ribolla Unit was built on a corner site, with aluminum panel walls and incorporating the existing,

partial height wall on two sides.

RIBOLLA FREESTANDING extra Sliding Glass panels

Here is an example of a 4m x 4m Ribolla freestanding veranda with extra sliding glass panels fitted. In this case, as well as having the front and left sidewall as sliding glass panels, 1/2 of the 4m backwall is also Sliding Glass panels.

(the other half of the backwall is solid aluminum panel)
